Standard Deviation: A statistical measure of portfolio risk used to measure variability of total return around an average, over a specified period of time. The greater the standard deviation over the period, the wider the variability or range of returns and hence, the greater the fund's volatility.

Active Share: Represents the proportion of portfolio holdings that differ from those in the benchmark index.

Alpha: A statistic that measures the difference between the Fund's actual returns and its benchmark, given its level of risk as measured by beta. The difference is expressed as an annual percentage.

Beta: A statistic that measures the volatility of the fund, as compared to that of the overall market.

R-Squared: Measures the percentage of a fund's returns that can be explained by the returns of the benchmark.

Maximum Drawdown: Measures the largest single drop from peak to trough in the value of a portfolio (before a new peak is achieved).

Sharpe Ratio: The Sharpe ratio is calculated by subtracting the risk-free rate, such as that of the 10-year U.S. Treasury bond from the rate of return for a portfolio and dividing the result by the standard deviation of the portfolio returns.

Downside Capture Ratio: Measures a fund's performance versus a benchmark during periods where the benchmark had a negative return.

Definitions and Disclosures

This report is not an offer of the Needham Growth Fund. Shares are sold only through the currently effective prospectus, which must precede or accompany this report. To obtain a copy of the Fund's current prospectus, please visit www.needhamfunds.com or contact the Fund's transfer agent, U.S. Bancorp Fund Services, LLC at 1-800-625-7071. Funds holding smaller capitalized companies are subject to greater price fluctuation than those of larger companies. Total return figures include reinvestment of all dividends and capital gains.

Please read the prospectus or summary prospectus and consider the investment objectives, risks, and charges and expenses of the Fund carefully before you invest. The prospectus and summary prospectus contain this and other information about the Fund. Short sales present the risk that the price of the security sold short will increase in value between the time of the short sale and the time the Fund must purchase the security to return it to the lender. The Fund may not be able to close a short position at a favorable price or time and the loss of value on a short sale is potentially unlimited. Investment returns and principal value will fluctuate, and when redeemed, shares may be worth more or less than their original cost. Shares held 60 days or less are subject to a short-term redemption fee of 2%. The results contained in this report represent past performance of the Fund. Past performance does not guarantee future results and current performance may be higher or lower than these results.

***Percentage of total investments as of 03/31/17, which means all stocks held long plus cash minus all short positions.
